

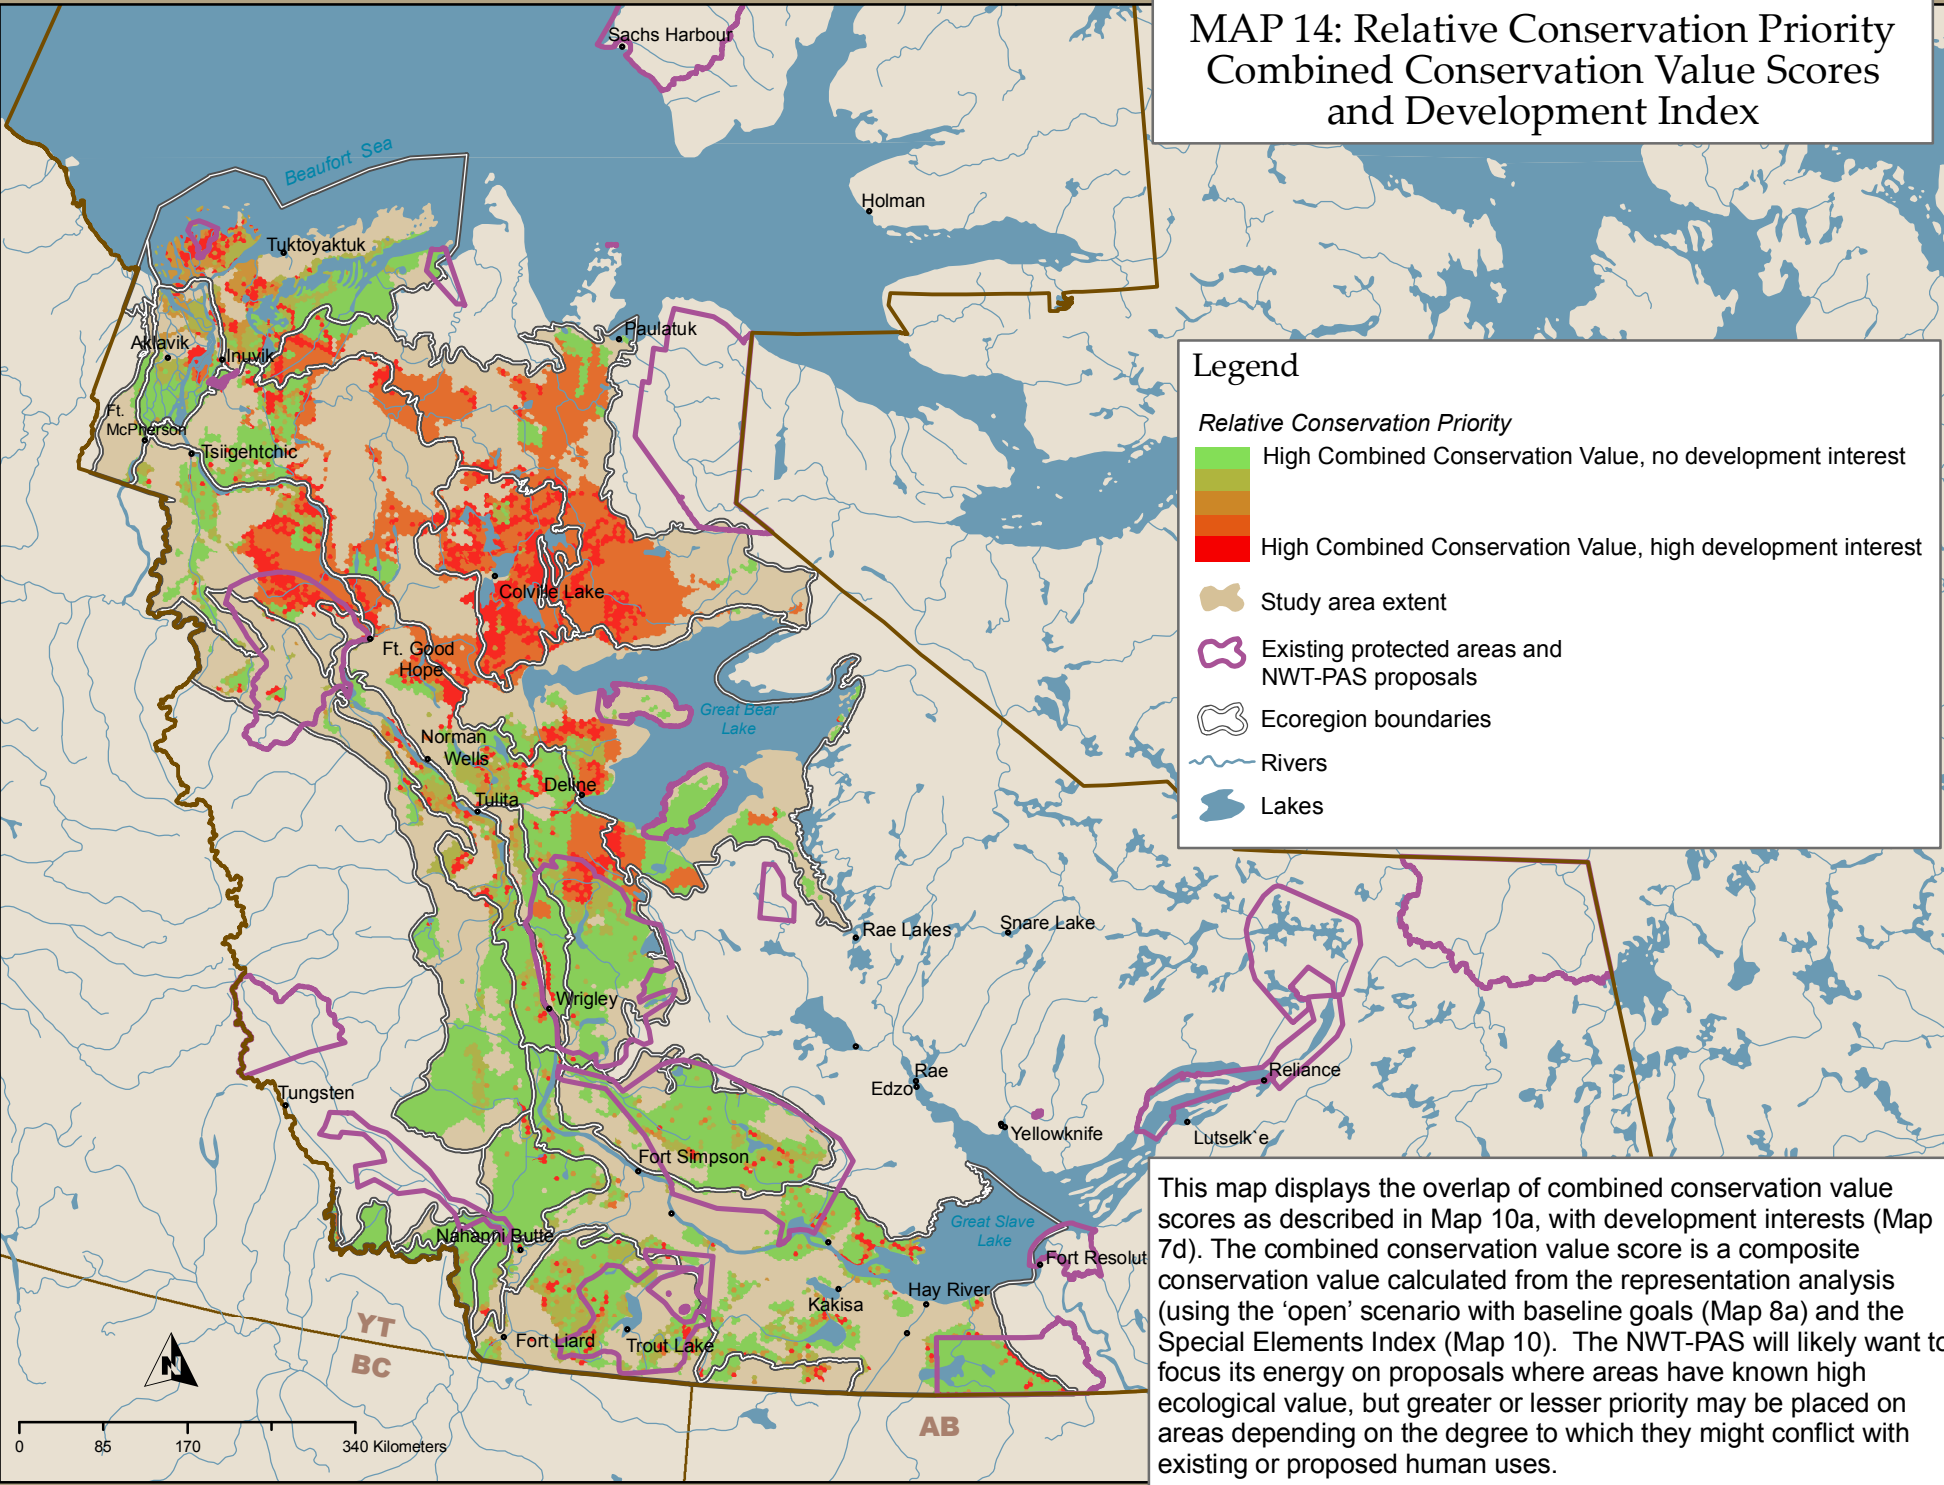

**MAP 14: Relative Conservation Priority
Combined Conservation Value Scores
and Development Index**

Legend

Relative Conservation Priority

- High Combined Conservation Value, no development interest
- High Combined Conservation Value, high development interest

- Study area extent
- Existing protected areas and NWT-PAS proposals
- Ecoregion boundaries
- Rivers
- Lakes

This map displays the overlap of combined conservation value scores as described in Map 10a, with development interests (Map 7d). The combined conservation value score is a composite conservation value calculated from the representation analysis (using the 'open' scenario with baseline goals (Map 8a) and the Special Elements Index (Map 10). The NWT-PAS will likely want to focus its energy on proposals where areas have known high ecological value, but greater or lesser priority may be placed on areas depending on the degree to which they might conflict with existing or proposed human uses.
